Hi!

My name is Christian Karlsson Korbacz. I am 30 years old and am a newly trained Software / Frontend developer. I live in Malmö with my wife and our cat. I have previously worked both in sales to the private market and the corporate market, as well as as a babysitter for Malmö city preschools. But now I feel it's time for me to change industry to what is truly my passion. I.e Computers, Programming, development of digital products or computer games.

Who am I?

I am a man in his 30s who has a great hunger for improvement in software and frontend development skills. I have been doing a bit of programming by creating various mods for the Elder Scrolls games (Morrowind for the most part) where I got to learn a Perl based programming language. Later I tried a bit with learning C# and with hubris I tried to make a 3D survival game that did not go beyond a basic combat system.

In the winter of 2021, I tried to learn programming again and started out by making various simple games with Unity and C#. As a result, I have an ongoing passion project very much inspired by Super Mario but have it has a difficulty similar to Dark Souls. (the latter came by itself.) And more than that, I got a keen interest in building websites using HTML, CSS JavaScript and ReactJS.

I decided that I needed to take a course to be able to gain a foothold in this particular labor market as I knew then that I wanted to work with programming full time.

Otherwise, I am very interested in gaming, acrylic painting, camping and outdoor life, history. Previously, I also engaged in historical reenactment with Viking theme.

If you have more questions or concerns, you can contact me via email, phone or my website.

Thank you for taking the time to read this personal letter and hope to hear from you soon.

With regards

Christian Karlsson Korbacz
